### INTRODUCTION

ServerQuery is a command-line interface built into the *TeamSpeak 3 Server* which allows powerful scripting and automation tools to be built based on the exact same instruction set and functionality provided by the *TeamSpeak 3 Client*. For example, you can use scripts to automate the management of virtual servers or nightly backups. In short, you can perform operations more efficiently by using *ServerQuery* scripts than you can by using a user interface.

This manual describes the general *ServerQuery* usage and syntax and provides examples for all commands available on a *TeamSpeak 3 Server* running version >= **3.0.2**.

### How to Establish a Server Query Connection

Connecting to a *ServerQuery* interface can be done by using a character-mode terminal client such as *Telnet* or *PuTTY*. Basically, a *ServerQuery* client is acting like a real client, except it's unable to send or receive voice data.

Per default, the *TeamSpeak 3 Server* is waiting for incoming *ServerQuery* connections on port *10011* (TCP). On success, the server should welcome you with a TS3 prompt.

### COMMAND SYNTAX

This section describes the syntax of all ServerQuery commands.

### SUMMARY OF COMMAND SYNTAX

ServerQuery commands follow the general syntax of:

```
command [parameter...] [option...]
```

The command is a single word which may contain lowercase letters, digits and underscore symbols (a-z 0-9 \_) followed by a whitespace. A parameter block is made up of one or more key-value pairs separated by a whitespace. In addition, various commands support options which are specified with a leading minus. For example:

```
command key1=value1 key2=value2 -option1 -option2
```

Some commands accept grouped or nested parameters, therefore allowing you to apply an action on more than one object. Those parameters are separated by a pipe symbol (|). For example:

```
command key1=value1|key1=value2|key1=value3
```

The pipe symbol (|) is also used to separate list items (e.g. multiple clients in a virtual servers clientlist).

### EXAMPLES OF COMMAND SYNTAX

The following provides some common *ServerQuery* syntax examples:

```
serverlist
clientlist -uid -away -groups
clientdbfind pattern=ScP
clientdbfind pattern=FPMPSC6MXqXq751dX7BKV0JniSo= -uid
clientkick reasonid=5 reasonmsg=Go\saway! clid=1|clid=2|clid=3
channelmove cid=16 cpid=1 order=0
sendtextmessage targetmode=2 target=12 msg=Hello\sWorld!
```

### **ESCAPING**

You cannot use whitespaces or any special characters in parameters. Instead, the *TeamSpeak 3 Server* supports the use of escape patterns which can be used to insert newlines, tabs or other special characters into a parameter string. The same escape patterns are used to clean up the servers output and prevent parsing issues.

Here's an example on how to escape a parameter string correctly.

#### RIGHT

serveredit virtualserver\_name=TeamSpeak\s]\p[\sServer

### **WRONG**:

serveredit virtualserver\_name=TeamSpeak ]|[ Server

The following characters need to be escaped if they are to be used:

NAME	CHAR	ASCII	REPLACE CHAR	REPLACE ASCII
Backslash	\	92	\\	92 92
Slash	/	47	\/	92 47
Whitespace	11 11	32	\s	92 115
Pipe	1	124	\p	92 112
Bell	\a	7	\a	92 97
Backspace	\b	8	\b	92 98
Formfeed	\f	12	\f	92 102
Newline	\n	10	\n	92 110
Carriage Return	\r	13	\r	92 114
Horizontal Tab	\t	9	\t	92 116
Vertical Tab	\v	11	\v	92 118

### WHITELISTING AND BLACKLISTING

The *TeamSpeak 3 Server* includes flood protection technology for the *ServerQuery* interface which means that a *ServerQuery* client can only execute a finite number of commands per time unit. These limits are controlled by the following server instance properties:

- SERVERINSTANCE\_SERVERQUERY\_FLOOD\_COMMANDS
- SERVERINSTANCE\_SERVERQUERY\_FLOOD\_TIME

Per default, the *TeamSpeak 3 Server* will not allow more than 10 commands within 3 seconds from the same source. You can use the following command to modify these settings:

instanceedit serverinstance\_serverquery\_flood\_commands=10 serverinstance\_serverquery\_flood\_time=3

If you're using automated scripts or web applications to manage your servers, it's most likely possible that you'll exceed those limits. Therefore, the *TeamSpeak 3 Server* provides whitelisting and blacklisting features for the *ServerQuery* interface.

### HOW TO USE THE WHITELIST

The whitelist is a list of approved hosts that are allowed to ignore the flood protection settings on a *TeamSpeak 3 Server*. For example, if you're using a web administration interface, we strongly recommend that you add the IP address of your web server to the whitelist file. In a new installation of the *TeamSpeak 3 Server*, this file is called *query\_ip\_whitelist.txt* and it contains the loopback IP address of your server (127.0.0.1). You can enter an infinite number of IP addresses to the whitelist, one IP address per line.

85.25.120.233 80.190.225.233 75.125.142.2 194.97.114.2 79.218.0.0/16 127.0.0.1

The TeamSpeak 3 Server also supports <u>Classless Inter-Domain Routing</u> (CIDR) notation so you can easily add an entire network to your whitelists. CIDR notation uses a syntax of specifying IP addresses using the base address of the network followed by a slash and the size of the routing prefix, e.g., 192.168.0.0/16 (IPv4) and 2001:db8::/32 (IPv6).

### HOW TO USE THE BLACKLIST

The blacklist is a list of hosts that, for one reason or another, are being denied access to the *ServerQuery* interface. In a new installation of the *TeamSpeak 3 Server*, this file is called *query\_ip\_blacklist.txt* and is empty. The syntax of this file is equal to the whitelist, e.g. 0.0.0.0/0 will refuse all incoming connections.

### COMMAND REFERENCE

This is a list of the commands available when using the *TeamSpeak 3 ServerQuery* interface.

### HELP

Provides information about *ServerQuery* commands. Used without parameters, help lists and briefly describes every command.

#### Permissions:

b\_serverinstance\_help\_view

### Syntax:

help [{command}]

error id=0 msg=ok

### Example:

```
help serverinfo
Usage: serverinfo
Displays detailed configuration information about a virtual server including ID, number of clients online, configuration, etc.
```

### QUIT

Closes the ServerQuery connection to the TeamSpeak 3 Server instance.

### Syntax:

quit

### Example:

quit

### LOGIN

Authenticates with the *TeamSpeak 3 Server* instance using given *ServerQuery* login credentials.

### **Related Permissions:**

b\_serverquery\_login

### Syntax:

```
login client_login_name={username} client_login_password={password}
login {username} {password}
```

### Example:

```
login client_login_name=xyz client_login_password=xyz
error id=0 msg=ok
```

### LOGOUT

Deselects the active virtual server and logs out from the server instance.

### Permissions:

b\_serverquery\_login

### Syntax:

logout

### Example:

logout

error id=0 msg=ok

### **VERSION**

Displays the servers version information including platform and build number.

### Permissions:

b\_serverinstance\_version\_view

### Syntax:

version

### Example:

version

version=3.0.0-alpha4 build=9155 platform=Linux error id=0 msg=ok

### HOSTINFO

Displays detailed connection information about the server instance including uptime, number of virtual servers online, traffic information, etc.

For detailed information, see **Server Instance Properties**.

### Permissions:

b\_serverinstance\_info\_view

#### Svntax:

hostinfo

### Example:

hostinfo

 $instance\_uptime=1903203\ host\_timestamp\_utc=1259337246\ virtualservers\_running\_total=1\\ connection\_filetransfer\_bandwidth\_sent=0\ ...\\ error\ id=0\ msg=ok$ 

### INSTANCEINFO

Displays the server instance configuration including database revision number, the file transfer port, default group IDs, etc.

For detailed information, see Server Instance Properties.

### Permissions:

b\_serverinstance\_info\_view

### Syntax:

instanceinfo

### Example:

instanceinfo

serverinstance\_database\_version=11 serverinstance\_filetransfer\_port=30033 serverinstance\_template\_guest\_serverquery\_group=1 serverinstance\_template\_serveradmin\_group=3 ... error id=0 msg=ok

### INSTANCEEDIT

Changes the server instance configuration using given properties.

For detailed information, see **Server Instance Properties**.

### Permissions:

b\_serverinstance\_modify\_settings

### Svntax

instanceedit [instance\_properties...]

### Example:

instanceedit serverinstance\_filetransfer\_port=1337
error id=0 msg=ok

### BINDINGLIST

Displays a list of IP addresses used by the server instance on multi-homed machines.

#### Permissions:

b\_serverinstance\_binding\_list

### Syntax:

bindinglist

### Example:

bindinglist
 ip=0.0.0.0
 error id=0 msg=ok

### USE

Selects the virtual server specified with sid or port to allow further interaction. The *ServerQuery* client will appear on the virtual server and acts like a real *TeamSpeak 3 Client*, except it's unable to send or receive voice data.

If your database contains multiple virtual servers using the same UDP port, use will select a random virtual server using the specified port.

#### Permissions:

b\_virtualserver\_select

#### Syntax:

```
use [sid={serverID}] [port={serverPort}] [-virtual]
use {serverID} [-virtual]
```

#### Example:

use sid=1 error id=0 msg=ok

### SERVERLIST

Displays a list of virtual servers including their ID, status, number of clients online, etc. If you're using the -all option, the server will list all virtual servers stored in the database. This can be useful when multiple server instances with different machine IDs are using the same database. The machine ID is used to identify the server instance a virtual server is associated with.

The status of a virtual server can be either online, offline, deploy running, booting up, shutting down and virtual online. While most of them are self-explanatory, virtual online is a bit more complicated.

Please note that whenever you select a virtual server which is currently stopped, it will be started in virtual mode which means you are able to change its configuration, create channels or change permissions, but no regular *TeamSpeak 3 Client* can connect. As soon as the last *ServerQuery* client deselects the virtual server, its status will be changed back to offline.

### Permissions:

b\_serverinstance\_virtualserver\_list

### Syntax

```
serverlist [-uid] [-short] [-all] [-onlyoffline]
```

### Example:

serverlist

 $\label{lem:continuous} \begin{tabular}{ll} virtual server\_port=9987 & virtual server\_status=online & virtual server\_clients on line=6 & ... & error & id=0 & msg=ok & ... &$ 

### SERVERIDGETBYPORT

Displays the database ID of the virtual server running on the UDP port specified by virtualserver\_port.

### Permissions:

b\_serverinstance\_virtualserver\_list

### Syntax:

serveridgetbyport virtualserver\_port={serverPort}

### Example:

```
serveridgetbyport virtualserver_port=9987
  server_id=1
  error id=0 msg=ok
```

### **SERVERDELETE**

Deletes the virtual server specified with sid. Please note that only virtual servers in stopped state can be deleted.

#### Permissions:

b\_virtualserver\_delete

#### Syntax:

serverdelete sid={serverID}

### Example:

```
serverdelete sid=1
error id=0 msg=ok
```

### **SERVERCREATE**

Creates a new virtual server using the given properties and displays its ID, port and initial administrator privilege key. If virtual server\_port is not specified, the server will test for the first unused UDP port.

The first virtual server will be running on UDP port 9987 by default. Subsequently started virtual servers will be running on increasing UDP port numbers.

For detailed information, see Virtual Server Properties.

### Permissions:

b\_virtualserver\_create

### Syntax:

servercreate virtualserver\_name={serverName} [virtualserver\_properties...]

### **Example**

```
servercreate virtualserver_name=TeamSpeak\s]\p[\sServer virtualserver_port=9988 virtualserver_maxclients=32 sid=2 virtualserver_port=9988 token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ60ZL3ycDp20W error id=0 msg=ok
```

### **SERVERSTART**

Starts the virtual server specified with sid. Depending on your permissions, you're able to start either your own virtual server only or all virtual servers in the server instance.

### Permissions:

b\_virtualserver\_start\_any b\_virtualserver\_start

### Syntax:

serverstart sid={serverID}

```
serverstart sid=1
error id=0 msg=ok
```

### **SERVERSTOP**

Stops the virtual server specified with sid. Depending on your permissions, you're able to stop either your own virtual server only or all virtual servers in the server instance.

### Permissions:

b\_virtualserver\_stop\_any b\_virtualserver\_stop

#### Syntax:

serverstop sid={serverID}

### Example:

serverstop sid=1 error id=0 msg=ok

### SERVERPROCESSSTOP

Stops the entire TeamSpeak 3 Server instance by shutting down the process.

#### Permissions:

b\_serverinstance\_stop

### Syntax:

serverprocessstop

### Example:

serverprocessstop error id=0 msg=ok

### **SERVERINFO**

Displays detailed configuration information about the selected virtual server including unique ID, number of clients online, configuration, etc.

For detailed information, see Virtual Server Properties.

### Permissions:

b\_virtualserver\_info\_view

### Syntax:

serverinfo

### Example:

serverinfo

 $\label{lem:continuou} virtualserver\_port=9987\ virtualserver\_unique\_identifier=zrPkjznB1tMnRwj01xx7RxXjqeY=virtualserver\_name=TeamSpeak\s]I[\sServer\ ...\error\ id=0\ msg=ok$ 

### SERVERREQUESTCONNECTIONINFO

Displays detailed connection information about the selected virtual server including uptime, traffic information, etc.

### Permissions:

b\_virtualserver\_connectioninfo\_view

### Syntax:

serverrequestconnectioninfo

### Example:

serverrequestconnectioninfo
 connection\_filetransfer\_bandwidth\_sent=0 connection\_filetransfer\_bandwidth\_received=0
 connection\_packets\_sent\_total=241454 ...
 error id=0 msg=ok

### **SERVEREDIT**

Changes the selected virtual servers configuration using given properties. Note that this command accepts multiple properties which means that you're able to change all settings of the selected virtual server at once.

For detailed information, see Virtual Server Properties.

#### Permissions:

b\_virtualserver\_modify\_name

b\_virtualserver\_modify\_welcomemessage

b\_virtualserver\_modify\_maxclients

b\_virtualserver\_modify\_reserved\_slots

b\_virtualserver\_modify\_password

b\_virtualserver\_modify\_default\_servergroup

b\_virtualserver\_modify\_default\_channelgroup

b\_virtualserver\_modify\_default\_channeladmingroup

b\_virtualserver\_modify\_ft\_settings

b\_virtualserver\_modify\_ft\_quotas

b\_virtualserver\_modify\_channel\_forced\_silence

b\_virtualserver\_modify\_complain

b\_virtualserver\_modify\_antiflood

b\_virtualserver\_modify\_hostmessage

b\_virtualserver\_modify\_hostbanner

b virtualserver modify hostbutton

b\_virtualserver\_modify\_port

b\_virtualserver\_modify\_autostart

b\_virtualserver\_modify\_needed\_identity\_security\_level

 $b\_virtual server\_modify\_priority\_speaker\_dimm\_modificator$ 

b\_virtualserver\_modify\_log\_settings

b\_virtualserver\_modify\_icon\_id

b\_virtualserver\_modify\_weblist

b\_virtualserver\_modify\_min\_client\_version

b\_virtualserver\_modify\_codec\_encryption\_mode

### Syntax:

serveredit [virtualserver\_properties...]

### Example:

serveredit virtualserver\_name=TeamSpeak\s]\p[\sServer virtualserver\_maxclients=32
error id=0 msa=ok

### SERVERGROUPLIST

Displays a list of server groups available. Depending on your permissions, the output may also contain global ServerQuery groups and template groups.

### Permissions:

 $b\_server instance\_modify\_query group$ 

b\_serverinstance\_modify\_templates

b\_virtualserver\_servergroup\_list

### Syntax

servergrouplist

### Example:

servergrouplist

 $sgid=9 \ name=Server\\ sAdmin \ type=1 \ iconid=300 \ savedb=1\\ |sgid=10 \ name=Normal \ type=1 \ iconid=0 \ savedb=1\\ |sgid=11 \ ... \ error \ id=0 \ msg=ok$ 

### SERVERGROUPADD

Creates a new server group using the name specified with name and displays its ID. The optional type parameter can be used to create ServerQuery groups and template groups. For detailed information, see

### Definitions.

### Permissions:

b\_virtualserver\_servergroup\_create

#### Syntax:

servergroupadd name={groupName} [type={groupDbType}]

### Example:

```
servergroupadd name=Server\sAdmin
sgid=13
error id=0 msg=ok
```

### SERVERGROUPDEL

Deletes the server group specified with sgid. If force is set to 1, the server group will be deleted even if there are clients within.

#### Permissions:

b\_virtualserver\_servergroup\_delete

#### Syntax

servergroupdel sgid={groupID} force={1|0}

### Example:

```
servergroupdel sgid=13
error id=0 msg=ok
```

### SERVERGROUPCOPY

Creates a copy of the server group specified with ssgid. If tsgid is set to 0, the server will create a new group. To overwrite an existing group, simply set tsgid to the ID of a designated target group. If a target group is set, the name parameter will be ignored.

The type parameter can be used to create ServerQuery groups and template groups. For detailed information, see <u>Definitions</u>.

### Permissions:

b\_virtualserver\_servergroup\_create i\_group\_modify\_power i\_group\_needed\_modify\_power

### Syntax:

 $server group copy \ ssgid = \{source Group ID\} \ tsgid = \{target Group ID\} \ name = \{group Name\} \ type = \{group Db Type\} \}$ 

### Example:

```
servergroupcopy ssgid=6 tsgid=0 name=My\sGroup\s(Copy) type=1
sgid=21
error id=0 msq=ok
```

### SERVERGROUPRENAME

Changes the name of the server group specified with sgid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power

### Syntax:

servergrouprename sgid={groupID} name={groupName}

```
servergrouprename sgid=13 name=New\sName
error id=0 msg=ok
```

### SERVERGROUPPERMLIST

Displays a list of permissions assigned to the server group specified with sgid. If the -permsid option is specified, the output will contain the permission names instead of the internal IDs.

### Permissions:

b\_virtualserver\_servergroup\_permission\_list

### Syntax:

servergrouppermlist sgid={groupID} [-permsid]

#### Example:

```
servergrouppermlist sgid=13
  permid=8470 permvalue=1 permnegated=0 permskip=0|permid=8475 permvalue=1 ...
  error id=0 msg=ok
```

### **SERVERGROUPADDPERM**

Adds a set of specified permissions to the server group specified with sgid. Multiple permissions can be added by providing the four parameters of each permission. A permission can be specified by permid or permid.

### Permissions:

```
i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power
```

#### Syntax:

```
server group addperm \ sgid=\{group ID\} \ [permid=\{perm ID\}...] \ [permsid=\{perm Name\}...] \\ permvalue=\{perm Value\}... \ permnegated=\{1|0\}... \ permskip=\{1|0\}... \\ p
```

#### **Examples**:

```
servergroupaddperm sgid=13 permid=17276 permvalue=50 permnegated=0 permskip=0|permid=21415
permvalue=20 permnegated=0
   error id=0 msg=ok

servergroupaddperm sgid=3 permsid=b_virtualserver_modify_maxclients permvalue=1 permnegated=0
permskip=0
   error id=0 msg=ok
```

### SERVERGROUPDELPERM

Removes a set of specified permissions from the server group specified with sgid. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

### Permissions:

```
i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power
```

### Syntax:

```
servergroupdelperm sgid={groupID} [permid={permID}...] [permsid={permName}...]
```

```
servergroupdelperm sgid=16 permid=17276|permid=21415
  error id=0 msg=ok

servergroupdelperm sgid=3 permsid=b_virtualserver_modify_maxclients
  error id=0 msg=ok
```

### SERVERGROUPADDCLIENT

Adds a client to the server group specified with sgid. Please note that a client cannot be added to default groups or template groups.

### Permissions:

i\_group\_member\_add\_power
i\_group\_needed\_member\_add\_power

#### Syntax:

servergroupaddclient sgid={groupID} cldbid={clientDBID}

### Example:

servergroupaddclient sgid=16 cldbid=3
error id=0 msg=ok

### SERVERGROUPDELCLIENT

Removes a client specified with cldbid from the server group specified with sgid.

#### Permissions:

i\_group\_member\_remove\_power i\_group\_needed\_member\_remove\_power

#### Syntax

servergroupdelclient sgid={groupID} cldbid={clientDBID}

### Example:

servergroupdelclient sgid=16 cldbid=3
 error id=0 msg=ok

### SERVERGROUPCLIENTLIST

Displays the IDs of all clients currently residing in the server group specified with sgid. If you're using the optional -names option, the output will also contain the last known nickname and the unique identifier of the clients.

### Permissions:

 $b\_virtualserver\_servergroup\_client\_list$ 

### Svntax:

servergroupclientlist sgid={groupID} [-names]

### Example:

servergroupclientlist sgid=16
 cldbid=7|cldbid=8|cldbid=9|cldbid=11|cldbid=13|cldbid=16|cldbid=18|cldbid=29|cldbid=32|cldbid=34|cldbid=37|cldbid=40|cldbid=47|cldbid=53
 error id=0 msg=ok

### SERVERGROUPSBYCLIENTID

Displays all server groups the client specified with clabid is currently residing in.

### Syntax

servergroupsbyclientid cldbid={clientDBID}

### Example:

servergroupsbyclientid cldbid=18 name=Server\sAdmin sgid=6 cldbid=18 error id=0 msg=ok

### SERVERGROUPAUTOADDPERM

Adds a set of specified permissions to \*ALL\* regular server groups on all virtual servers. The target groups will be identified by the value of their i\_group\_auto\_update\_type permission specified with sgtype. Multiple permissions can be added at once. A permission can be specified by permid or permid.

The known values for sgtype are:

- 10: Channel Guest
- 15: Server Guest
- 20: Query Guest
- 25: Channel Voice
- 30: Server Normal
- 35: Channel Operator
- 40: Channel Admin
- 45: Server Admin
- 50: Query Admin

#### Permissions:

b\_permission\_modify\_power\_ignore

#### Svntax:

```
server group auto add perm \ sg type=\{group ID\} \ [permid=\{perm ID\}...] \ [perm sid=\{perm Name\}...] \\ perm value=\{perm Value\}... \ perm negated=\{1|0\}... \ perm skip=\{1|0\}...
```

#### Example:

servergroupautoaddperm sgtype=45 permsid=b\_virtualserver\_start permvalue=1 permskip=0 permnegated=0 error id=0 msg=ok

### SERVERGROUPAUTODELPERM

Removes a set of specified permissions from \*ALL\* regular server groups on all virtual servers. The target groups will be identified by the value of their i\_group\_auto\_update\_type permission specified with sgtype. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

The known values for sgtype are:

- 10: Channel Guest
- 15: Server Guest
- 20: Query Guest
- 25: Channel Voice
- 30: Server Normal
- 35: Channel Operator
- 40: Channel Admin
- 45: Server Admin
- 50: Query Admin

### Permissions:

 $b\_permission\_modify\_power\_ignore$ 

### Syntax:

servergroupautoaddperm sgtype={groupID} [permid={permID}...] [permsid={permName}...]

### Example:

servergroupautoaddperm sgtype=45 permsid=b\_virtualserver\_start
error id=0 msq=ok

### SERVERSNAPSHOTCREATE

Displays a snapshot of the selected virtual server containing all settings, groups and known client identities. The data from a server snapshot can be used to restore a virtual servers configuration, channels and permissions using the serversnapshotdeploy command.

### Permissions:

b\_virtualserver\_snapshot\_create

#### Syntax:

serversnapshotcreate

### Example:

serversnapshotcreate

 $\label{lem:hash=bnTd2E1kNITHjJYRCFjgbKK05P8=|virtualserver\_unique\_identifier=zrPkjznB1tMnRwj01xx7RxXjqeY=virtualserver\_name=TeamSpeak\s]I[\sServer\_...error id=0 msg=ok$ 

### SERVERSNAPSHOTDEPLOY

Restores the selected virtual servers configuration using the data from a previously created server snapshot. Please note that the *TeamSpeak 3 Server* does **NOT** check for necessary permissions while deploying a snapshot so the command could be abused to gain additional privileges.

#### Permissions:

b\_virtualserver\_snapshot\_deploy

#### Syntax:

serversnapshotdeploy virtualserver\_snapshot

#### Example:

serversnapshotdeploy

hash=bnTd2E1kNITHjJYRCFjgbKK05P8=|virtualserver\_unique\_identifier=zrPkjznB1tMnRwj01xx7RxXjq= ... error id=0 msg=ok

### **SERVERNOTIFYREGISTER**

Registers for a specified category of events on a virtual server to receive notification messages. Depending on the notifications you've registered for, the server will send you a message on every event in the view of your *ServerQuery* client (e.g. clients joining your channel, incoming text messages, server configuration changes, etc). The event source is declared by the event parameter while id can be used to limit the notifications to a specific channel.

### Permissions:

b\_virtualserver\_notify\_register

### Syntax:

 $server notify register \ event = \{server | channel | textserver | textchannel | textprivate \} \ [id = \{channel ID\}]$ 

### Example:

servernotifyregister event=server error id=0 msa=ok

### SERVERNOTIFYUNREGISTER

Unregisters all events previously registered with servernotifyregister so you will no longer receive notification messages.

### Permissions:

b\_virtualserver\_notify\_unregister

### Syntax.

servernotifyunregister

### Example:

servernotifyunregister error id=0 msg=ok

### **SENDTEXTMESSAGE**

Sends a text message a specified target. The type of the target is determined by targetmode while target specifies the ID of the recipient, whether it be a virtual server, a channel or a client.

For detailed information, see **Definitions**.

#### Permissions:

i\_client\_private\_textmessage\_power i\_client\_needed\_private\_textmessage\_power b\_client\_server\_textmessage\_send b\_client\_channel\_textmessage\_send

#### Syntax:

 $send text message \ target mode = \{1-3\} \ target = \{serverID | channel ID | client ID\} \ msg = \{text\} \}$ 

#### Example:

```
sendtextmessage targetmode=2 target=1 msg=Hello\sWorld!
error id=0 msg=ok
```

### LOGVIEW

Displays a specified number of entries from the servers log. If instance is set to 1, the server will return lines from the master logfile (ts3server\_0.log) instead of the selected virtual server logfile.

### Permissions:

b\_serverinstance\_log\_view b\_virtualserver\_log\_view

#### Syntax:

```
logview [lines=\{1-100\}] [reverse=\{1|0\}] [instance=\{1|0\}] [begin_pos=\{n\}]
```

#### Example:

```
logview lines=30 last_pos=403788 file_size=411980 l=\p\slistening\son\s0.0.0:9987 ... error id=0 msg=ok
```

### LOGADD

Writes a custom entry into the servers log. Depending on your permissions, you'll be able to add entries into the server instance log and/or your virtual servers log. The <code>loglevel</code> parameter specifies the type of the entry.

For detailed information, see **Definitions**.

### Permissions:

b\_serverinstance\_log\_add b\_virtualserver\_log\_add

### Syntax:

```
logadd loglevel={1-4} logmsg={text}
```

### Example:

```
logadd loglevel=4 logmsg=Informational\smessage!
error id=0 msg=ok
```

### GM

Sends a text message to all clients on all virtual servers in the *TeamSpeak 3 Server* instance.

### Permissions:

 $b\_server in stance\_text message\_send$ 

### Syntax:

gm msg={text}

```
gm msg=Hello\sWorld!
  error id=0 msg=ok
```

### **CHANNELLIST**

Displays a list of channels created on a virtual server including their ID, order, name, etc. The output can be modified using several command options.

### Permissions:

b\_virtualserver\_channel\_list

### Syntax:

```
channellist [-topic] [-flags] [-voice] [-limits] [-icon]
```

### Example:

```
channellist -topic
  cid=15 pid=0 channel_order=0 channel_name=Default\sChannel channel_topic=Default\sChannel\shas\sno\s[b]topic[\/b]
  total_clients=2|cid=16 ...
  error id=0 msg=ok
```

### CHANNELINFO

Displays detailed configuration information about a channel including ID, topic, description, etc.

For detailed information, see Channel Properties.

### Permissions:

b\_channel\_info\_view

### Syntax:

channelinfo cid={channelID}

### Example:

```
channelinfo cid=1
  channel_name=Default\sChannel channel_topic=Default\sChannel\shas\sno\s[b]topic[\/b]
  channel_description=This\sis\sthe\sdefault\schannel ...
  error id=0 msd=ok
```

### CHANNELFIND

Displays a list of channels matching a given name pattern.

### Permissions:

b\_virtualserver\_channel\_search

### Syntax:

channelfind [pattern={channelName}]

### Example:

```
channelfind pattern=default
  cid=15 channel_name=Default\sChannel
  error id=0 msg=ok
```

### CHANNELMOVE

Moves a channel to a new parent channel with the ID cpid. If order is specified, the channel will be sorted right under the channel with the specified ID. If order is set to 0, the channel will be sorted right below the new parent.

### Permissions:

```
i_channel_min_depth
i_channel_max_depth
b_channel_modify_parent
b_channel_modify_sortorder
```

### Syntax

channelmove cid={channelID} cpid={channelParentID} [order={channelSortOrder}]

```
channelmove cid=16 cpid=1 order=0
  error id=0 msg=ok
```

### CHANNELCREATE

Creates a new channel using the given properties and displays its ID. Note that this command accepts multiple properties which means that you're able to specify all settings of the new channel at once.

For detailed information, see Channel Properties.

#### Permissions:

i\_channel\_min\_depth

i\_channel\_max\_depth

b\_channel\_create\_child

b\_channel\_create\_permanent

b\_channel\_create\_semi\_permanent

b\_channel\_create\_temporary

b\_channel\_create\_with\_topic

b\_channel\_create\_with\_description

b\_channel\_create\_with\_password

b\_channel\_create\_modify\_with\_codec\_speex8

b\_channel\_create\_modify\_with\_codec\_speex16

b\_channel\_create\_modify\_with\_codec\_speex32

b\_channel\_create\_modify\_with\_codec\_celtmono48

i\_channel\_create\_modify\_with\_codec\_maxquality

 $i\_channel\_create\_modify\_with\_codec\_latency\_factor\_min$ 

b\_channel\_create\_with\_maxclients

b\_channel\_create\_with\_maxfamilyclients

b\_channel\_create\_with\_sortorder

b\_channel\_create\_with\_default

b\_channel\_create\_with\_needed\_talk\_power

### Syntax:

channelcreate channel\_name={channelName} [channel\_properties...]

#### Example:

```
channelcreate channel_name=My\sChannel channel_topic=My\sTopic
  cid=16
  error id=0 msg=ok
```

### **CHANNELDELETE**

Deletes an existing channel by ID. If force is set to 1, the channel will be deleted even if there are clients within. The clients will be kicked to the default channel with an appropriate reason message.

### Permissions:

b\_channel\_delete\_permanent

 $b\_channel\_delete\_semi\_permanent$ 

 $b\_channel\_delete\_temporary$ 

b\_channel\_delete\_flag\_force

### Syntax:

channeldelete cid={channelID} force={1|0}

```
channeldelete cid=16 force=1
  error id=0 msg=ok
```

### CHANNELEDIT

Changes a channels configuration using given properties. Note that this command accepts multiple properties which means that you're able to change all settings of the channel specified with cid at once.

For detailed information, see Channel Properties.

#### Permissions:

i\_channel\_min\_depth

i\_channel\_max\_depth

b\_channel\_modify\_parent

b\_channel\_modify\_make\_default

b\_channel\_modify\_make\_permanent

b\_channel\_modify\_make\_semi\_permanent

b\_channel\_modify\_make\_temporary

b\_channel\_modify\_name

b\_channel\_modify\_topic

b\_channel\_modify\_description

b\_channel\_modify\_password

b\_channel\_modify\_codec

b\_channel\_create\_modify\_with\_codec\_speex8

b\_channel\_create\_modify\_with\_codec\_speex16

 $b\_channel\_create\_modify\_with\_codec\_speex32$ 

b\_channel\_create\_modify\_with\_codec\_celtmono48

b\_channel\_modify\_codec\_quality

b\_channel\_create\_modify\_with\_codec\_maxquality

b\_channel\_modify\_codec\_latency\_factor

b\_channel\_modify\_make\_codec\_encrypted

b\_channel\_modify\_maxclients

b\_channel\_modify\_maxfamilyclients

b\_channel\_modify\_sortorder

b\_channel\_modify\_needed\_talk\_power

i\_channel\_modify\_power

i\_channel\_needed\_modify\_power

### Syntax:

channeledit cid={channelID} [channel\_properties...]

### Example:

channeledit cid=15 channel\_codec\_quality=3 channel\_description=My\sDescription error id=0 msg=ok

### CHANNELGROUPLIST

Displays a list of channel groups available on the selected virtual server.

### Permissions:

b\_virtualserver\_channelgroup\_list

b\_serverinstance\_modify\_templates

### Syntax:

channelgrouplist

```
channelgrouplist
  cgid=1 name=Channel\sAdmin type=2 iconid=100 savedb=1|cgid=2 ...
  error id=0 msg=ok
```

### CHANNELGROUPADD

Creates a new channel group using a given name and displays its ID. The optional type parameter can be used to create ServerQuery groups and template groups.

For detailed information, see **Definitions**.

#### Permissions:

b\_virtualserver\_channelgroup\_create

#### Syntax:

channelgroupadd name={groupName} [type={groupDbType}]

### Example:

channelgroupadd name=Channel\sAdmin
 cgid=13
 error id=0 msg=ok

### CHANNELGROUPDEL

Deletes a channel group by ID. If force is set to 1, the channel group will be deleted even if there are clients within.

#### Permissions:

b\_virtualserver\_channelgroup\_delete

#### Syntax

channelgroupdel cgid={groupID} force={1|0}

### Example:

channelgroupdel cgid=13
 error id=0 msg=ok

### CHANNELGROUPCOPY

Creates a copy of the channel group specified with scgid. If tcgid is set to 0, the server will create a new group. To overwrite an existing group, simply set tcgid to the ID of a designated target group. If a target group is set, the name parameter will be ignored. The type parameter can be used to create ServerQuery groups and template groups.

For detailed information, see **Definitions**.

### Permissions:

b\_virtualserver\_channelgroup\_create i\_group\_modify\_power i\_group\_needed\_modify\_power

### Syntax:

channelgroupcopy scgid={sourceGroupID} tsgid={targetGroupID} name={groupName} type={groupDbType}

### Example:

```
channelgroupcopy scgid=4 tcgid=0 name=My\sGroup\s(Copy) type=1 cgid=33 error id=0 msg=ok
```

### CHANNELGROUPRENAME

Changes the name of a specified channel group.

### Permissions:

i\_group\_modify\_power
i\_group\_needed\_modify\_power

### Syntax:

channelgrouprename cgid={groupID} name={groupName}

```
channelgrouprename cgid=13 name=New\sName
error id=0 msg=ok
```

### CHANNELGROUPADDPERM

Adds a set of specified permissions to a channel group. Multiple permissions can be added by providing the two parameters of each permission. A permission can be specified by permid or permid.

### Permissions:

i\_group\_modify\_power
i\_group\_needed\_modify\_power
i\_permission\_modify\_power

### Syntax:

 $channel group addperm \ cgid=\{group ID\} \ [permid=\{perm ID\}...] \ [permsid=\{perm Name\}...] \ permvalue=\{perm Value\}... \ permid=\{perm Value\}...$ 

#### Example:

channelgroupaddperm cgid=13 permid=17276 permvalue=50|permid=21415 permvalue=20
 error id=0 msg=ok

### CHANNELGROUPPERMLIST

Displays a list of permissions assigned to the channel group specified with cgid. If the -permsid option is specified, the output will contain the permission names instead of the internal IDs.

#### Permissions:

b\_virtualserver\_channelgroup\_permission\_list

#### Syntax

channelgrouppermlist cgid={groupID} [-permsid]

### Example:

```
channelgrouppermlist cgid=13
  permid=8470 permvalue=1 permnegated=0 permskip=0|permid=8475 permvalue=1 ...
  error id=0 msd=ok
```

### CHANNELGROUPDELPERM

Removes a set of specified permissions from the channel group. Multiple permissions can be removed at once. A permission can be specified by permid or permid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power i\_permission\_modify\_power

### Syntax:

 $channel group del perm \ cgid=\{group ID\} \ [permid=\{perm ID\}...] \ [permsid=\{perm Name\}...]$ 

### Example:

```
channelgroupdelperm cgid=16 permid=17276|permid=21415
  error id=0 msg=ok
```

### CHANNELGROUPCLIENTLIST

Displays all the client and/or channel IDs currently assigned to channel groups. All three parameters are optional so you're free to choose the most suitable combination for your requirements.

### Permissions:

b\_virtualserver\_channelgroup\_client\_list

### Svntax

channelgroupclientlist [cid={channelID}] [cldbid={clientDBID}] [cgid={groupID}]

```
channelgroupclientlist cid=2 cgid=9
  cid=2 cldbid=9 cgid=9|cid=2 cldbid=24 cgid=9|cid=2 cldbid=47 cgid=9
  error id=0 msg=ok
```

### SETCLIENTCHANNELGROUP

Sets the channel group of a client to the ID specified with cgid.

#### Permissions:

i\_group\_member\_add\_power i\_group\_needed\_member\_add\_power i\_group\_member\_remove\_power i\_group\_needed\_member\_remove\_power

#### Syntax:

setclientchannelgroup cgid={groupID} cid={channelID} cldbid={clientDBID}

#### Example:

setclientchannelgroup cgid=13 cid=15 cldbid=20
error id=0 msg=ok

### CHANNELPERMLIST

Displays a list of permissions defined for a channel.

### Permissions:

b\_virtualserver\_channel\_permission\_list

#### Syntax:

channelpermlist cid={channelID} [-permsid]

### Example:

channelpermlist cid=2
 cid=2 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 ...
 error id=0 msg=ok

### CHANNELADDPERM

Adds a set of specified permissions to a channel. Multiple permissions can be added by providing the two parameters of each permission. A permission can be specified by permid or permsid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power i\_permission\_modify\_power

### Syntax:

channeladdperm cid={channelID} [permid={permID}...] [permsid={permName}...] permvalue={permValue}...

### Example:

channeladdperm cid=16 permid=17276 permvalue=50|permid=21415 permvalue=20
 error id=0 msg=ok

### **CHANNELDELPERM**

Removes a set of specified permissions from a channel. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

### Permissions:

i\_group\_modify\_power
i\_group\_needed\_modify\_power
i\_permission\_modify\_power

### Syntax:

channeldelperm cid=123 [permid={permID}...] [permsid={permName}...]

### Example:

channeldelperm cid=16 permid=17276|permid=21415
error id=0 msq=ok

### **CLIENTLIST**

Displays a list of clients online on a virtual server including their ID, nickname, status flags, etc. The output can be modified using several command options.

Please note that the output will only contain clients which are currently in channels you're able to subscribe to.

#### Permissions:

b\_virtualserver\_client\_list i\_channel\_subscribe\_power i\_channel\_needed\_subscribe\_power

#### Syntax:

clientlist [-uid] [-away] [-voice] [-times] [-groups] [-info] [-icon] [-country]

### Example:

```
clientlist -away
  clid=5 cid=7 client_database_id=40 client_nickname=ScP client_type=0 client_away=1
  client_away_message=not\shere|clid=6 ...
  error id=0 msg=ok
```

### **CLIENTINFO**

Displays detailed configuration information about a client including unique ID, nickname, client version, etc.

### Permissions:

b\_client\_info\_view

#### Syntax:

clientinfo clid={clientID}

### Example:

```
clientinfo clid=6
  client_unique_identifier=P5H2hrN6+gpQI4n\/dXp3p17vtY0= client_nickname=Rabe85 client_version=3.0.0-
  alpha24\s[Build:\s8785]\s(UI:\s8785) ...
  error id=0 msg=ok
```

### CLIENTFIND

Displays a list of clients matching a given name pattern.

### Permissions:

b\_virtualserver\_client\_search

### Syntax:

clientfind pattern={clientName}

### Example:

```
clientfind pattern=sven
  clid=7 client_nickname=Sven
  error id=0 msg=ok
```

### CLIENTEDIT

Changes a clients settings using given properties.

For detailed information, see Client Properties.

### Permissions:

```
b_client_modify_description
b_client_set_talk_power
```

### Svntax

clientedit clid={clientID} [client\_properties...]

```
clientedit clid=10 client_description=Best\sguy\sever!
  error id=0 msg=ok
```

### CLIENTDBLIST

Displays a list of client identities known by the server including their database ID, last nickname, etc.

### Permissions:

b\_virtualserver\_client\_dblist

### Syntax:

clientdblist [start={offset}] [duration={limit}] [-count]

### Example:

clientdblist

cldbid=7 client\_unique\_identifier=DZhdQU58qyooEK4Fr8Ly738hEmc= client\_nickname=MuhChy client\_created=1259147468
client\_lastconnected=1259421233 error id=0 msg=ok

### CLIENTDBINFO

Displays detailed database information about a client including unique ID, creation date, etc.

#### Permissions:

b\_virtualserver\_client\_dbinfo

#### Syntax:

clientdbinfo cldbid={clientDBID}

### Example:

clientdbfind cldbid=4

 $\label{limit_continuous} {\tt client\_unique\_identifier=FPMPSC6MXqXq751dX7BKV0JniSo=client\_nickname=ScP\ client\_created=1265411019\ error\ id=0\ msg=ok$ 

### CLIENTDBFIND

Displays a list of client database IDs matching a given pattern. You can either search for a clients last known nickname or his unique identity by using the -uid option.

### Permissions:

b\_virtualserver\_client\_dbsearch

### Syntax:

clientdbfind pattern={clientName|clientUID} [-uid]

### Example:

clientdbfind pattern=sven
 cldbid=56
 error id=0 msg=ok

### CLIENTDBEDIT

Changes a clients settings using given properties.

For detailed information, see Client Properties.

### Permissions:

b\_client\_modify\_dbproperties b\_client\_modify\_description b\_client\_set\_talk\_power

### Syntax:

clientdbedit cldbid={clientDBID} [client\_properties...]

### Example:

clientdbedit cldbid=56 client\_description=Best\sguy\sever!
 error id=0 msg=ok

### CLIENTDBDELETE

Deletes a clients properties from the database.

### Permissions:

b\_client\_delete\_dbproperties

### Syntax:

clientdbdelete cldbid={clientDBID}

### Example:

clientdbdelete cldbid=56
 error id=0 msg=ok

### **CLIENTGETIDS**

Displays all client IDs matching the unique identifier specified by cluid.

### Syntax:

clientgetids cluid={clientUID}

#### Example:

clientgetids cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= clid=1 name=Janko
 error id=0 msg=ok

### CLIENTGETDBIDFROMUID

Displays the database ID matching the unique identifier specified by cluid.

#### Syntax

 $\verb|clientgetdbidfromuid cluid={clientUID}| \\$ 

#### Example:

clientgetdbidfromuid cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32
 error id=0 msg=ok

### CLIENTGETNAMEFROMUID

Displays the database ID and nickname matching the unique identifier specified by cluid.

### Syntax:

clientgetnamefromuid cluid={clientUID}

### Example:

clientgetnamefromuid cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32 name=Janko
 error id=0 msg=ok

### CLIENTGETNAMEFROMDBID

Displays the unique identifier and nickname matching the database ID specified by clabid.

### Svntax

clientgetnamefromdbid cldbid={clientDBID}

### Example:

clientgetnamefromdbid cldbid=32
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32 name=Janko
 error id=0 msg=ok

### CLIENTSETSERVERQUERYLOGIN

Updates your own *ServerQuery* login credentials using a specified username. The password will be autogenerated.

### Permissions:

b\_client\_create\_modify\_serverquery\_login

### Syntax:

clientsetserverquerylogin client\_login\_name={username}

### Example:

clientsetserverquerylogin client\_login\_name=admin
 client\_login\_password=+r\/TQqvR
 error id=0 msg=ok

### CLIENTUPDATE

Change your ServerQuery clients settings using given properties.

For detailed information, see Client Properties.

#### Syntax:

clientupdate [client\_properties...]

#### Example:

clientupdate client\_nickname=ScP\s(query)
error id=0 msg=ok

### **CLIENTMOVE**

Moves one or more clients specified with clid to the channel with ID cid. If the target channel has a password, it needs to be specified with cpw. If the channel has no password, the parameter can be omitted.

### Permissions:

i\_client\_move\_power i\_client\_needed\_move\_power

### Syntax:

clientmove clid={clientID}... cid={channelID} [cpw={channelPassword}]

### Example:

clientmove clid=5|clid=6 cid=3
 error id=0 msg=ok

### CLIENTKICK

Kicks one or more clients specified with clid from their currently joined channel or from the server, depending on reasonid. The reasonmsg parameter specifies a text message sent to the kicked clients. This parameter is optional and may only have a maximum of 40 characters.

For detailed information, see **Definitions**.

### Permissions:

i\_client\_kick\_from\_server\_power i\_client\_kick\_from\_channel\_power i\_client\_needed\_kick\_from\_server\_power i\_client\_needed\_kick\_from\_channel\_power

### Syntax:

clientkick clid={clientID}... reasonid={4|5} [reasonmsg={text}]
Example:

clientkick clid=5|clid=6 reasonid=4 reasonmsg=Go\saway!
error id=0 msg=ok

### **CLIENTPOKE**

Sends a poke message to the client specified with clid.

### Permissions:

i\_client\_poke\_power
i\_client\_needed\_poke\_power

#### Syntax:

clientpoke clid={clientID}... msg={text}

#### Example:

clientpoke clid=5 msg=Wake\sup!
error id=0 msg=ok

### **CLIENTPERMLIST**

Displays a list of permissions defined for a client.

#### Permissions:

b\_virtualserver\_client\_permission\_list

#### Syntax:

clientpermlist cldbid={clientDBID} [-permsid]

### Example:

clientpermlist cldbid=2
 cldbid=2 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 permnegated=0
 permskip=0|permid=21415 ...
 error id=0 msg=ok

### CLIENTADDPERM

Adds a set of specified permissions to a client. Multiple permissions can be added by providing the three parameters of each permission. A permission can be specified by permid or permid.

### Permissions:

i\_group\_modify\_power
i\_group\_needed\_modify\_power
i\_permission\_modify\_power

### Syntax

clientaddperm cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]
permvalue={permValue}... permskip={1|0}...

### **Example**

clientaddperm cldbid=16 permid=17276 permvalue=50 permskip=1|permid=21415 permvalue=20 permskip=0
error id=0 msg=ok

### CLIENTDELPERM

Removes a set of specified permissions from a client. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power i\_permission\_modify\_power

### Syntax:

channeldelperm cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

### Example:

clientdelperm cldbid=16 permid=17276|permid=21415
error id=0 msg=ok

### CHANNELCLIENTPERMLIST

Displays a list of permissions defined for a client in a specific channel.

### Permissions:

b\_virtualserver\_channelclient\_permission\_list

#### Syntax

channelclientpermlist cid={channelID} cldbid={clientDBID} [-permsid]

### Example:

```
channelclientpermlist cid=12 cldbid=3
  cid=12 cldbid=3 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 permnegated=0
  permskip=0|permid=21415 ...
  error id=0 msg=ok
```

### CHANNELCLIENTADDPERM

Adds a set of specified permissions to a client in a specific channel. Multiple permissions can be added by providing the three parameters of each permission. A permission can be specified by permid or permid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power i\_permission\_modify\_power

#### Syntax:

 $channel \verb|clientaddperm| cid=\{channel ID\}| cldbid=\{client DBID\}| [permid=\{permID\}...]| [permsid=\{permName\}...]| permvalue=\{permValue\}...| permvalue=\{permValue\}...| permsid=\{permValue\}...| permsid$ 

### Example:

channelclientaddperm cid=12 cldbid=3 permid=17276 permvalue=50|permid=21415 permvalue=20 error id=0 msa=ok

### CHANNELCLIENTDELPERM

Removes a set of specified permissions from a client in a specific channel. Multiple permissions can be removed at once. A permission can be specified by permid or permid.

### Permissions:

i\_group\_modify\_power i\_group\_needed\_modify\_power i\_permission\_modify\_power

### Syntax:

channelclientdelperm cid={channelID} cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

### Example:

```
channelclientdelperm cid=12 cldbid=3 permid=17276|permid=21415
  error id=0 msg=ok
```

### **PERMISSIONLIST**

Displays a list of permissions available on the server instance including ID, name and description.

### Permissions:

b\_serverinstance\_permission\_list

### Syntax:

permissionlist

### Example:

```
permissionlist
```

 $permid=21413\ permname=b\_client\_channel\_textmessage\_send\ permdesc=Send\stext\smessages\sto\schannel\permid=21414\ permname=i\_client\_talk\_power\ ...\ error\ id=0\ msg=ok$ 

### PERMIDGETBYNAME

Displays the database ID of one or more permissions specified by permsid.

### Permissions:

b\_serverinstance\_permission\_list

#### Syntax:

permidgetbyname permsid={permName}...

### Example:

permidgetbyname permsid=b\_serverinstance\_help\_view|permsid=b\_serverinstance\_info\_view
permsid=b\_serverinstance\_help\_view permid=4353|permsid=b\_serverinstance\_info\_view permid=4355
error id=0 msd=ok

### **PERMOVERVIEW**

Displays all permissions assigned to a client for the channel specified with cid. If permid is set to 0, all permissions will be displayed. A permission can be specified by permid or permsid.

#### Permissions:

b\_client\_permissionoverview\_view

#### Syntax:

permoverview cid={channelID} cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

#### Example:

### PERMGET

Displays the current value of the permission specified with permid or permsid for your own connection. This can be useful when you need to check your own privileges.

### Permissions:

b\_client\_permissionoverview\_own

### Syntax:

```
permget permid={permID}
permget permsid={permName}
```

### Example:

```
permget permid=21174
  permsid=i_client_move_power permid=21174 permvalue=100
  error id=0 msg=ok

permget permsid=i_client_move_power
  permsid=i_client_move_power permid=21174 permvalue=100
  error id=0 msg=ok
```

### PERMFIND

Displays detailed information about all assignments of the permission specified with permid. The output is similar to permoverview which includes the type and the ID of the client, channel or group associated with the permission. A permission can be specified by permid or permid.

### Permissions:

```
b_virtualserver_permission_find b_serverinstance_permission_find
```

### Syntax:

```
permfind [permid={permID}...] [permsid={permName}...]
```

```
permfind permid=4353
  t=0 id1=1 id2=0 p=4353|t=0 id1=2 id2=0 p=4353
  error id=0 msg=ok
```

### **PERMRESET**

Restores the default permission settings on the selected virtual server and creates a new initial administrator token. Please note that in case of an error during the permreset call - e.g. when the database has been modified or corrupted - the virtual server will be deleted from the database.

### Permissions:

b\_virtualserver\_permission\_reset

#### Svntax:

permreset

#### Example:

permreset
 token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ6OZL3ycDp2OW
 error id=0 msg=ok

### **PRIVILEGEKEYLIST**

Displays a list of privilege keys available including their type and group IDs. Tokens can be used to gain access to specified server or channel groups.

A privilege key is similar to a client with administrator privileges that adds you to a certain permission group, but without the necessity of a such a client with administrator privileges to actually exist. It is a long (random looking) string that can be used as a ticket into a specific server group.

### Permissions:

b\_virtualserver\_token\_list

#### Svntax:

privilegekeylist

### Example:

privilegekeylist
 token=88CVUg\/zkujt+y+WfHdko79UcM4R6uyCL6nEfy3B token\_type=0 token\_id1=9 token\_id2=0 ...
 error id=0 msg=ok

### **PRIVILEGEKEYADD**

Create a new token. If tokentype is set to 0, the ID specified with tokenid1 will be a server group ID. Otherwise, tokenid1 is used as a channel group ID and you need to provide a valid channel ID using tokenid2.

The tokencustomset parameter allows you to specify a set of custom client properties. This feature can be used when generating tokens to combine a website account database with a TeamSpeak user. The syntax of the value needs to be escaped using the ServerQuery escape patterns and has to follow the general syntax of:

ident=ident1 value=value1|ident=ident2 value=value2|ident=ident3 value=value3

### Permissions:

b\_virtualserver\_token\_add

### Syntax:

privilegekeyadd tokentype={1|0} tokenid1={groupID} tokenid2={channelID}
[tokendescription={description}] [tokencustomset={customFieldSet}]

### Example:

tokenadd tokentype=0 tokenid1=6 tokenid2=0 tokendescription=Test\stoken\swith\scustom\sset
tokencustomset=ident=forum\_user\svalue=Sven\sPaulsen\pident=forum\_id\svalue=123
token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ60ZL3ycDp20W
error id=0 msg=ok

### **PRIVILEGEKEY DELETE**

Deletes an existing token matching the token key specified with token.

### Permissions:

b\_virtualserver\_token\_delete

### Syntax:

privilegekeydelete token={tokenKey}

### Example:

privilegekeydelete token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ6OZL3ycDp2OW
 error id=0 msg=ok

### **PRIVILEGEKEYUSE**

Use a token key gain access to a server or channel group. Please note that the server will automatically delete the token after it has been used.

### Permissions:

b\_virtualserver\_token\_use

#### Syntax:

privilegekeyuse token={tokenKey}

#### Example:

privilegekeyuse token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ6OZL3ycDp2OW
 error id=0 msg=ok

### **MESSAGELIST**

Displays a list of offline messages you've received. The output contains the senders unique identifier, the messages subject, etc.

### Syntax:

messagelist

### Example:

messagelist

 ${\tt msgid=4~cluid=xwEzb5ENOaglVHu9oelK++reUyE=~subject=Test~timestamp=1259439465~flag\_read=0~...}$  error id=0 msg=ok

### **MESSAGEADD**

Sends an offline message to the client specified by cluid.

### Syntax:

messageadd cluid={clientUID} subject={subject} message={text}

### Example:

messageadd cluid=oHhi9WzXLNEFQOwAu4JYKGU+C+c= subject=Hi! message=Where\aare\syou?!?
error id=0 msg=ok

### **MESSAGEDEL**

Deletes an existing offline message with ID msgid from your inbox.

### Svntax

messagedel msgid={messageID}

### Example:

messagedel msgid=4 error id=0 msg=ok

### **MESSAGEGET**

Displays an existing offline message with ID msgid from your inbox. Please note that this does not automatically set the flag\_read property of the message.

### Syntax:

messageget msgid={messageID}

### Example:

```
messageget msgid=4
msgid=4 cluid=xwEzb5ENOaglVHu9oelK++reUyE= subject=Hi! message=Where\aare\syou?!?
error id=0 msg=ok
```

### **MESSAGEUPDATEFLAG**

Updates the flag\_read property of the offline message specified with msgid. If flag is set to 1, the message will be marked as read.

### Syntax:

messageupdateflag msgid={messageID} flag={1|0}

#### Example:

```
messageupdateflag msgid=4 flag=1
error id=0 msg=ok
```

### COMPLAINLIST

Displays a list of complaints on the selected virtual server. If tcldbid is specified, only complaints about the targeted client will be shown.

#### Permissions:

b\_client\_complain\_list

### Syntax:

complainlist [tcldbid={targetClientDBID}]

### Example:

```
complainlist tcldbid=3
  tcldbid=3 tname=Julian fcldbid=56 fname=Sven message=Bad\sguy! timestamp=1259440948 ...
  error id=0 msg=ok
```

### COMPLAINADD

Submits a complaint about the client with database ID tcldbid to the server.

### Permissions:

```
i_client_complain_power
i_client_needed_complain_power
```

### Syntax:

complainadd tcldbid={targetClientDBID} message={text}

### Example:

```
complainadd tcldbid=3 message=Bad\sguy!
error id=0 msg=ok
```

### COMPLAINDELALL

Deletes all complaints about the client with database ID tcldbid from the server.

### Permissions:

b\_client\_complain\_delete

### Syntax:

complaindelall tcldbid={targetClientDBID}

```
complaindelall tcldbid=3
error id=0 msg=ok
```

### COMPLAINDEL

Deletes the complaint about the client with ID tcldbid submitted by the client with ID fcldbid from the server.

### Permissions:

b\_client\_complain\_delete b\_client\_complain\_delete\_own

#### Syntax:

complaindel tcldbid={targetClientDBID} fcldbid={fromClientDBID}

#### Example:

```
complaindel tcldbid=3 fcldbid=4
error id=0 msg=ok
```

### **BANCLIENT**

Bans the client specified with ID clid from the server. Please note that this will create two separate ban rules for the targeted clients IP address and his unique identifier.

### Permissions:

i\_client\_ban\_power i\_client\_needed\_ban\_power

#### Syntax

banclient clid={clientID} [time={timeInSeconds}] [banreason={text}]

### Example:

```
banclient clid=4 time=3600
banid=2
banid=3
error id=0 msg=ok
```

### **BANLIST**

Displays a list of active bans on the selected virtual server.

### Permissions:

b\_client\_ban\_list

### Syntax:

banlist

### Example:

banlist

banid=7 ip=1.2.3.4 created=1259444002242 invokername=Sven invokercldbid=56 invokeruid=oHhi9WzXLNEFQ0wAu4JYKGU+C+c=reason enforcements=0 error id=0 msg=ok

### BANADD

Adds a new ban rule on the selected virtual server. All parameters are optional but at least one of the following must be set: ip, name, or uid.

### Permissions:

b\_client\_ban\_create

### Syntax:

```
banadd [ip={regexp}] [name={regexp}] [uid={clientUID}]
[time={timeInSeconds}] [banreason={text}]
```

```
banadd ip=1.2.3.4 banreason=just\s4\sfun
banid=1
error id=0 msg=ok
```

### BANDEL

Deletes the ban rule with ID banid from the server.

#### Permissions:

b\_client\_ban\_delete b\_client\_ban\_delete\_own

#### Syntax:

bandel banid={banID}

### Example:

bandel banid=3
 error id=0 msg=ok

### BANDELALL

Deletes all active ban rules from the server.

### Permissions:

b\_client\_ban\_delete

### Syntax:

bandela11

### Example:

bandelall error id=0 msg=ok

### FTINITUPLOAD

Initializes a file transfer upload. clientftfid is an arbitrary ID to identify the file transfer on client-side. On success, the server generates a new ftkey which is required to start uploading the file through *TeamSpeak 3*'s file transfer interface.

### Permissions:

i\_ft\_file\_upload\_power i\_ft\_needed\_file\_ upload \_power i\_ft\_quota\_mb\_upload\_per\_client

### Syntax:

 $\label{timitupload} fitinitupload clientftfid=\{clientFileTransferID\} \ name=\{filePath\} \ cid=\{channelID\} \ cpw=\{channelPassword\} \ size=\{fileSize\} \ overwrite=\{1|0\} \ resume=\{1|0\}$ 

### Example:

ftinitupload clientftfid=1 name=\/image.iso cid=5 cpw= size=673460224 overwrite=1 resume=0 clientftfid=1 serverftfid=6 ftkey=itRNdsIOvcBiBg\/Xj4Ge51ZSrsShHuid port=30033 seekpos=0 error id=0 msg=ok

### FTINITDOWNLOAD

Initializes a file transfer download. clientftfid is an arbitrary ID to identify the file transfer on client-side. On success, the server generates a new ftkey which is required to start downloading the file through *TeamSpeak 3*'s file transfer interface.

### Permissions:

i\_ft\_file\_download\_power
i\_ft\_needed\_file\_ download \_power
i\_ft\_quota\_mb\_ download \_per\_client

### Syntax:

 $\label{timitdownload} file Transfer ID \} \ name = \{file Path\} \ cid = \{channel ID\} \ cpw = \{channel Password\} \ seek Position\}$ 

### Example:

ftinitdownload clientftfid=1 name=\/image.iso cid=5 cpw= seekpos=0 clientftfid=1 serverftfid=7 ftkey=NrOga\/4d2GpYC5oKgxuclT037X83ca\/1 port=30033 size=673460224 error id=0 msg=ok

### **FTLIST**

Displays a list of running file transfers on the selected virtual server. The output contains the path to which a file is uploaded to, the current transfer rate in bytes per second, etc.

### Permissions:

b\_ft\_transfer\_list

### Syntax:

ftlist

### Example:

ftlist

 $\label{linear_continuous_contin$ 

### **FTGETFILELIST**

Displays a list of files and directories stored in the specified channels file repository.

### Permissions:

i\_ft\_file\_browse\_power i\_ft\_needed\_file\_browse\_power

### Syntax:

ftgetfilelist cid={channelID} cpw={channelPassword} path={filePath}

#### Example:

```
ftgetfilelist cid=2 cpw= path=\/
  cid=2 path=\/ name=Stuff size=0 datetime=1259415210 type=0|name=Pic1.PNG size=563783 datetime=1259425462
  type=1|name=Pic2.PNG ...
  error id=0 msg=ok
```

### **FTGETFILEINFO**

Displays detailed information about one or more specified files stored in a channels file repository.

### Permissions:

i\_ft\_file\_browse\_power
i\_ft\_needed\_file\_browse\_power

### Syntax:

ftgetfileinfo cid={channelID} cpw={channelPassword} name={filePath}...

### Example:

```
ftgetfileinfo cid=2 cpw= path=\/Pic1.PNG|cid=2 cpw= path=\/Pic2.PNG cid=2 path=\/ name=Stuff size=0 datetime=1259415210 type=0|name=Pic1.PNG size=563783 datetime=1259425462 type=1|name=Pic2.PNG ... error id=0 msg=ok
```

### **FTSTOP**

Stops the running file transfer with server-side ID serverftfid.

### Syntax:

ftstop serverftfid={serverFileTransferID} delete={1|0}

```
ftstop serverftfid=2 delete=1
  error id=0 msg=ok
```

### **FTDELETEFILE**

Deletes one or more files stored in a channels file repository.

### Permissions:

i\_ft\_file\_delete\_power
i\_ft\_needed\_file\_delete\_power

#### Syntax:

ftdeletefile cid={channelID} cpw={channelPassword} name={filePath}...

#### **Example**

ftdeletefile cid=2 cpw= name=\/Pic1.PNG|name=\/Pic2.PNG
 error id=0 msg=ok

### **FTCREATEDIR**

Creates new directory in a channels file repository.

### Permissions:

i\_ft\_directory\_create\_power i\_ft\_needed\_file\_directory\_create\_power

#### Syntax

ftcreatedir cid={channelID} cpw={channelPassword} dirname={dirPath}

#### Example:

ftcreatedir cid=2 cpw= dirname=\/My\sDirectory
error id=0 msg=ok

### **FTRENAMEFILE**

Renames a file in a channels file repository. If the two parameters told and topw are specified, the file will be moved into another channels file repository.

### Permissions:

i\_ft\_file\_rename\_power
i\_ft\_needed\_file\_rename\_power

### Syntax:

ftrenamefile cid={channelID} cpw={channelPassword} [tcid={targetChannelID}]
[tcpw={targetChannelPassword}] oldname={oldFilePath} newname={newFilePath}

### **Example**:

ftrenamefile cid=2 cpw= tcid=3 tcpw=secret oldname=\/Pic3.PNG newname=\/Pic3.PNG error id=0 msg=ok

### CUSTOMSEARCH

Searches for custom client properties specified by ident and value. The value parameter can include regular characters and SQL wildcard characters (e.g. %).

### Syntax:

customsearch ident={ident} pattern={pattern}

### Example:

customsearch ident=forum\_account pattern=%ScP%
 cldbid=2 ident=forum\_account value=ScP
 error id=0 msg=ok

### CUSTOMINFO

Displays a list of custom properties for the client specified with cldbid.

### Syntax:

custominfo cldbid={clientDBID}

### Example:

custominfo cldbid=3 cldbid=3 ident=forum\_account value=ScP|ident=forum\_id value=123 error id=0 msg=ok

### WHOAMI

 $Displays\ information\ about\ your\ current\ \textit{ServerQuery}\ connection\ including\ your\ loginname,\ etc.$ 

### Syntax:

whoami

### Example:

whoami

 $virtual server\_status = on line \ virtual server\_id = 1 \ virtual server\_unique\_identifier = zrPkjznB1tMnRwj01xx7RxXjqeY = line virtual server\_id = 1 \ virtual server\_unique\_identifier = zrPkjznB1tMnRwj01xx7RxXjqeY = line virtual server\_id = 1 \ virtual server\_unique\_identifier = zrPkjznB1tMnRwj01xx7RxXjqeY = line virtual server\_id = 1 \ virtual server\_unique\_identifier = zrPkjznB1tMnRwj01xx7RxXjqeY = line virtual server\_unique\_un$ client\_channel\_id=2 ... error id=0 msg=ok

# SERVER INSTANCE PROPERTIES

This is a list of properties available for the server instance:

NAME	CHANGABLE
INSTANCE_UPTIME	No
Uptime in seconds	
HOST_TIMESTAMP_UTC	No
Current server date and time as UTC timestamp	
VIRTUALSERVERS_RUNNING_TOTAL	No
Number of virtual servers running	
CONNECTION_FILETRANSFER_BANDWIDTH_SENT	No
Current bandwidth used for outgoing file transfers (Bytes/s)	
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED	No
Current bandwidth used for incoming file transfers (Bytes/s)	
CONNECTION_PACKETS_SENT_TOTAL	No
Total amount of packets sent	
CONNECTION_PACKETS_RECEIVED_TOTAL	No
Total amount of packets received	
CONNECTION_BYTES_SENT_TOTAL	No
Total amount of bytes sent	
CONNECTION_BYTES_RECEIVED_TOTAL	No
Total amount of bytes received	NY.
CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL	No
Average bandwidth used for outgoing data in the last second (Bytes/s)	B.T.
CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL	No
Average bandwidth used for incoming data in the last second (Bytes/s)	D.T.
CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL	No
Average bandwidth used for outgoing data in the last minute (Bytes/s)	No
CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL	No
Average bandwidth used for incoming data in the last minute (Bytes/s)	No
SERVERINSTANCE_DATABASE_VERSION  Database revision number	NO
SERVERINSTANCE_GUEST_SERVERQUERY_GROUP	Yes
Default ServerQuery group ID	165
SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP	Yes
Default template group ID for administrators on new virtual servers (used to create initial token)	103
SERVERINSTANCE FILETRANSFER_PORT	Yes
TCP port used for file transfers	105
SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH	Yes
Max bandwidth available for outgoing file transfers (Bytes/s)	
SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH	Yes
Max bandwidth available for incoming file transfers (Bytes/s)	
SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP	Yes
Default server group ID used in templates	
SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP	Yes
Default channel group ID used in templates	
SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP	Yes
Default channel administrator group ID used in templates	
VIRTUALSERVERS_TOTAL_MAXCLIENTS	No
Max number of clients for all virtual servers	
VIRTUALSERVERS_TOTAL_CLIENTS_ONLINE	No
Number of clients online on all virtual servers	
VIRTUALSERVERS_TOTAL_CHANNELS_ONLINE	No
Number of channels on all virtual servers	
SERVERINSTANCE_SERVERQUERY_FLOOD_COMMANDS	Yes
Max number of commands allowed in <serverinstance_serverquery_flood_time> seconds</serverinstance_serverquery_flood_time>	
SERVERINSTANCE_SERVERQUERY_FLOOD_TIME	Yes
Timeframe in seconds for <serverinstance_serverquery_flood_commands> commands</serverinstance_serverquery_flood_commands>	
SERVERINSTANCE_SERVERQUERY_FLOOD_BAN_TIME	Yes
Time in seconds used for automatic bans triggered by the ServerQuery flood protection	

# VIRTUAL SERVER PROPERTIES

This is a list of properties available for virtual servers:

NAME	CHANGABLE
VIRTUALSERVER_NAME	Yes
Name of the virtual server	
VIRTUALSERVER_WELCOMEMESSAGE	Yes
Welcome message of the virtual server	
VIRTUALSERVER_MAXCLIENTS	Yes
Number of slots available on the virtual server	
VIRTUALSERVER_PASSWORD	Yes
Password of the virtual server	
VIRTUALSERVER_FLAG_PASSWORD	No
Indicates whether the server has a password set or not	
VIRTUALSERVER_CLIENTSONLINE	No
Number of clients connected to the virtual server	
VIRTUALSERVER_QUERYCLIENTSONLINE	No
Number of ServerQuery clients connected to the virtual server	
VIRTUALSERVER_CHANNELSONLINE	No
Number of channels created on the virtual server	
VIRTUALSERVER_CREATED	No
Creation date and time of the virtual server as UTC timestamp	
VIRTUALSERVER_UPTIME	No
Uptime in seconds	
VIRTUALSERVER_HOSTMESSAGE	Yes
Host message of the virtual server	
VIRTUALSERVER_HOSTMESSAGE_MODE	Yes
Host message mode of the virtual server (see <u>Definitions</u> )	
VIRTUALSERVER_DEFAULT_SERVER_GROUP	Yes
Default server group ID	
VIRTUALSERVER_DEFAULT_CHANNEL_GROUP	Yes
Default channel group ID	100
VIRTUALSERVER_DEFAULT_CHANNEL_ADMIN_GROUP	Yes
Default channel administrator group ID	
VIRTUALSERVER_PLATFORM	No
Operating system the server is running on	
VIRTUALSERVER VERSION	No
Server version information including build number	
VIRTUALSERVER MAX_DOWNLOAD_TOTAL_BANDWIDTH	Yes
Max bandwidth for outgoing file transfers on the virtual server (Bytes/s)	100
VIRTUALSERVER_MAX_UPLOAD_TOTAL_BANDWIDTH	Yes
Max bandwidth for incoming file transfers on the virtual server (Bytes/s)	
VIRTUALSERVER_HOSTBANNER_URL	Yes
Host banner URL opened on click	100
VIRTUALSERVER_HOSTBANNER_GFX_URL	Yes
Host banner URL used as image source	100
VIRTUALSERVER_HOSTBANNER_GFX_INTERVAL	Yes
Interval for reloading the banner on client-side	100
VIRTUALSERVER_COMPLAIN_AUTOBAN_COUNT	Yes
Number of complaints needed to ban a client automatically	
VIRTUALSERVER_COMPLAIN_AUTOBAN_TIME	Yes
Time in seconds used for automatic bans triggered by complaints	100
VIRTUALSERVER_COMPLAIN_REMOVE_TIME	Yes
Time in seconds before a complaint is deleted automatically	1.00
VIRTUALSERVER_MIN_CLIENTS_IN_CHANNEL_BEFORE_FORCED_SILENCE	Yes
Number of clients in the same channel needed to force silence	
VIRTUALSERVER_PRIORITY_SPEAKER_DIMM_MODIFICATOR	Yes
Client volume lowered automatically while a priority speaker is talking	1 0 0
VIRTUALSERVER_ANTIFLOOD_POINTS_TICK_REDUCE	Yes
Anti-flood points removed from a client for being good	
. j	

VIRTUALSERVER_ANTIFLOOD_POINTS_NEEDED_COMMAND_BLOCK Anti-flood points needed to block commands being executed by the client  VIRTUALSERVER_ANTIFLOOD_POINTS_NEEDED_IP_BLOCK Anti-flood points needed to block incoming connections from the client  VIRTUALSERVER_HOSTBANNER_MODE The display mode for the virtual servers hostbanner (see Definitions)  VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA  Pownlead quest for the virtual server (MPsts)	Yes Yes Yes No No No Yes
VIRTUALSERVER_ANTIFLOOD_POINTS_NEEDED_IP_BLOCK Anti-flood points needed to block incoming connections from the client  VIRTUALSERVER_HOSTBANNER_MODE The display mode for the virtual servers hostbanner (see Definitions)  VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	Yes No No No
Anti-flood points needed to block incoming connections from the client  VIRTUALSERVER_HOSTBANNER_MODE  The display mode for the virtual servers hostbanner (see Definitions)  VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS  Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	Yes No No No
VIRTUALSERVER_HOSTBANNER_MODE  The display mode for the virtual servers hostbanner (see Definitions)  VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY  Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS  Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	No No No
The display mode for the virtual servers hostbanner (see Definitions)  VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	No No No
VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY Indicates whether the initial privilege key for the virtual server has been used or not VIRTUALSERVER_CLIENT_CONNECTIONS Total number of clients connected to the virtual server since it was last started VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS Total number of ServerQuery clients connected to the virtual server since it was last started VIRTUALSERVER_HOSTBUTTON_TOOLTIP Text used for the tooltip of the host button on client-side VIRTUALSERVER_HOSTBUTTON_GFX_URL Text used for the tooltip of the host button on client-side VIRTUALSERVER_HOSTBUTTON_URL URL opened on click on the host button VIRTUALSERVER_DOWNLOAD_QUOTA	No No
Indicates whether the initial privilege key for the virtual server has been used or not  VIRTUALSERVER_CLIENT_CONNECTIONS  Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	No No
VIRTUALSERVER_CLIENT_CONNECTIONS  Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	No
Total number of clients connected to the virtual server since it was last started  VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	No
VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS  Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	
Total number of ServerQuery clients connected to the virtual server since it was last started  VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	
VIRTUALSERVER_HOSTBUTTON_TOOLTIP  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	Yes
Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	103
VIRTUALSERVER_HOSTBUTTON_GFX_URL  Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	
Text used for the tooltip of the host button on client-side  VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	Yes
VIRTUALSERVER_HOSTBUTTON_URL  URL opened on click on the host button  VIRTUALSERVER_DOWNLOAD_QUOTA	103
URL opened on click on the host button VIRTUALSERVER_DOWNLOAD_QUOTA	Yes
VIRTUALSERVER_DOWNLOAD_QUOTA	103
	Yes
Download quota for the virtual server (MByte)	
VIRTUALSERVER_UPLOAD_QUOTA	Yes
Download quota for the virtual server (MByte)	
VIRTUALSERVER_MONTH_BYTES_DOWNLOADED	No
Number of bytes downloaded from the virtual server on the current month	
VIRTUALSERVER_MONTH_BYTES_UPLOADED	No
Number of bytes uploaded to the virtual server on the current month	
VIRTUALSERVER_TOTAL_BYTES_DOWNLOADED	No
Number of bytes downloaded from the virtual server since it was last started	
VIRTUALSERVER_TOTAL_BYTES_UPLOADED	No
Number of bytes uploaded to the virtual server since it was last started	
VIRTUALSERVER_UNIQUE_IDENTIFER	No
Unique ID of the virtual server	
VIRTUALSERVER_ID	No
Database ID of the virtual server	
VIRTUALSERVER_MACHINE_ID	Yes
Machine ID identifying the server instance associated with the virtual server in the database	37
VIRTUALSERVER_PORT	Yes
UDP port the virtual server is listening on	37
VIRTUALSERVER_AUTOSTART	Yes
Indicates whether the server starts automatically with the server instance or not CONNECTION_FILETRANSFER_BANDWIDTH_SENT	No
CONNECTION_FILETRANSFER_BANDWIDTH_SENT  Current bandwidth used for outgoing file transfers (Bytes/s)	No
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED	No
Connection_File: Inansfer_bandwidth_Inansfers (Bytes/s)	INO
CONNECTION PACKETS SENT TOTAL	No
Total amount of packets sent	INO
CONNECTION_PACKETS_RECEIVED_TOTAL	No
Total amount of packets received	140
CONNECTION_BYTES_SENT_TOTAL	No
Total amount of bytes sent	
CONNECTION_BYTES_RECEIVED_TOTAL	No
Total amount of bytes received	
CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL	No
Average bandwidth used for outgoing data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL	No
Average bandwidth used for incoming data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL	No
Average bandwidth used for outgoing data in the last minute (Bytes/s)	N.T.
Average bandwidth used for outgoing data in the last minute (Bytes/s)  CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL	No

NAME	CHANGABLE
VIRTUALSERVER_STATUS	Yes
Status of the virtual server (online   virtual online   offline   booting up   shutting down  )	
VIRTUALSERVER_ LOG_CLIENT	Yes
Indicates whether the server logs events related to clients or not	
VIRTUALSERVER_ LOG_QUERY	Yes
Indicates whether the server logs events related to ServerQuery clients or not	
VIRTUALSERVER_ LOG_CHANNEL	Yes
Indicates whether the server logs events related to channels or not	
VIRTUALSERVER_ LOG_PERMISSIONS	Yes
Indicates whether the server logs events related to permissions or not	
VIRTUALSERVER_ LOG_SERVER	Yes
Indicates whether the server logs events related to server changes or not	
VIRTUALSERVER_ LOG_FILETRANSFER	Yes
Indicates whether the server logs events related to file transfers or not	
VIRTUALSERVER_MIN_CLIENT_VERSION	Yes
Min client version required to connect	
VIRTUALSERVER_NEEDED_IDENTITY_SECURITY_LEVEL	Yes
Minimum client identity security level required to connect to the virtual server	
VIRTUALSERVER_NAME_PHONETIC	Yes
Phonetic name of the virtual server	
VIRTUALSERVER_ICON_ID	Yes
CRC32 checksum of the virtual server icon	
VIRTUALSERVER_RESERVED_SLOTS	Yes
Number of reserved slots available on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_SPEECH	No
The average packet loss for speech data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_KEEPALIVE	No
The average packet loss for keepalive data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_CONTROL	No
The average packet loss for control data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_TOTAL	No
The average packet loss for all data on the virtual server	
VIRTUALSERVER_TOTAL_PING	No
The average ping of all clients connected to the virtual server	
VIRTUALSERVER_IP	No
The IPv4 address the virtual server is listening on	
VIRTUALSERVER_WEBLIST_ENABLED	Yes
Indicates whether the server appears in the global web server list or not	
VIRTUALSERVER_CODEC_ENCRYPTION_MODE	Yes
The global codec encryption mode of the virtual server	
VIRTUALSERVER_FILEBASE	No
The directory where the virtual servers filebase is located	

# CHANNEL PROPERTIES

This is a list of properties available for channels:

NAME	CHANGABLE
CHANNEL_NAME	Yes
Name of the channel	
CHANNEL_TOPIC	Yes
Topic of the channel	
CHANNEL_DESCRIPTION	Yes
Description of the channel	
CHANNEL_PASSWORD	Yes
Password of the channel	
CHANNEL_FLAG_PASSWORD	No
Indicates whether the channel has a password set or not	
CHANNEL CODEC	Yes
Codec used by the channel (see <u>Definitions</u> )	
CHANNEL_CODEC_QUALITY	Yes
Codec quality used by the channel	
CHANNEL_MAXCLIENTS	Yes
Individual max number of clients for the channel	
CHANNEL_MAXFAMILYCLIENTS	Yes
Individual max number of clients for the channel family	
CHANNEL_ORDER	Yes
ID of the channel below which the channel is positioned	
CHANNEL_FLAG_PERMANENT	Yes
Indicates whether the channel is permanent or not	
CHANNEL_FLAG_SEMI_PERMANENT	Yes
Indicates whether the channel is semi-permanent or not	
CHANNEL_FLAG_TEMPORARY	Yes
Indicates whether the channel is temporary or not	
CHANNEL_FLAG_DEFAULT	Yes
Indicates whether the channel is the virtual servers default channel or not	
CHANNEL_FLAG_MAXCLIENTS_UNLIMITED	Yes
Indicates whether the channel has a max clients limit or not	
CHANNEL_FLAG_MAXFAMILYCLIENTS_UNLIMITED	Yes
Indicates whether the channel has a max family clients limit or not	
CHANNEL_FLAG_MAXFAMILYCLIENTS_INHERITED	Yes
Indicates whether the channel inherits the max family clients from his parent channel or not	
CHANNEL_NEEDED_TALK_POWER	Yes
Needed talk power for this channel	
CHANNEL_NAME_PHONETIC	Yes
Phonetic name of the channel	
CHANNEL_FILEPATH	No
Path of the channels file repository	
CHANNEL_FORCED_SILENCE	No
Indicates whether the channel is silenced or not	
CHANNEL_ICON_ID	Yes
CRC32 checksum of the channel icon	
CHANNEL_CODEC_IS_UNENCRYPTED	Yes
Indicates whether speech data transmitted in this channel is encrypted or not	
CPID	Yes
The channels parent ID	
CID	No

# CLIENT PROPERTIES

This is a list of properties available for clients:

NAME	CHANGABLE
CLIENT_UNIQUE_IDENTIFIER	No
Unique ID of the client	
CLIENT_NICKNAME	Yes
Nickname of the client	
CLIENT_VERSION	No
Client version information including build number	
CLIENT_PLATFORM	No
Operating system the client is running on	NI -
CLIENT_INPUT_MUTED  Indicates whether the client has their microphone muted or not	No
CLIENT_OUTPUT_MUTED	No
Indicates whether the client has their speakers muted or not	INO
CLIENT_INPUT_HARDWARE	No
Indicates whether the client has enabled their capture device or not	140
CLIENT_OUTPUT_HARDWARE	No
Indicates whether the client has enabled their playback device or not	110
CLIENT_DEFAULT_CHANNEL	No
Default channel of the client	110
CLIENT_LOGIN_NAME	No
Username of a ServerQuery client	
CLIENT_DATABASE_ID	No
Database ID of the client	
CLIENT_CHANNEL_GROUP_ID	No
Current channel group ID of the client	
CLIENT_SERVER_GROUPS	No
Current server group IDs of the client separated by a comma	
CLIENT_CREATED	No
Creation date and time of the clients first connection to the server as UTC timestamp	
CLIENT_LASTCONNECTED	No
Creation date and time of the clients last connection to the server as UTC timestamp	
CLIENT_TOTALCONNECTIONS	No
Total number of connections from this client since the server was started	
CLIENT_AWAY	No
Indicates whether the client is away or not	
CLIENT_AWAY_MESSAGE	No
Away message of the client	
CLIENT_TYPE	No
Indicates whether the client is a ServerQuery client or not	
CLIENT_FLAG_AVATAR	No
Indicates whether the client has set an avatar or not	
CLIENT_TALK_POWER	No
The clients current talk power	
CLIENT_TALK_REQUEST	No
Indicates whether the client is requesting talk power or not	
CLIENT_TALK_REQUEST_MSG	No
The clients current talk power request message	
CLIENT_IS_TALKER	Yes
Indicates whether the client is able to talk or not	NY.
CLIENT_MONTH_BYTES_DOWNLOADED	No
Number of bytes downloaded by the client on the current month	N.Y
CLIENT_MONTH_BYTES_UPLOADED	No
Number of bytes uploaded by the client on the current month	N.T
CLIENT_TOTAL_BYTES_DOWNLOADED	No
Number of bytes downloaded by the client since the server was started	TA T
CLIENT_TOTAL_BYTES_UPLOADED	No
Number of bytes uploaded by the client since the server was started	

NAME	CHANGABLE
CLIENT_IS_PRIORITY_SPEAKER	No
Indicates whether the client is a priority speaker or not	
CLIENT_UNREAD_MESSAGES	No
Number of unread offline messages in this clients inbox	
CLIENT_NICKNAME_PHONETIC	No
Phonetic name of the client	
CLIENT_DESCRIPTION	Yes
Brief description of the client	
CLIENT_NEEDED_SERVERQUERY_VIEW_POWER	No
The clients current ServerQuery view power	
CONNECTION_FILETRANSFER_BANDWIDTH_SENT	No
Current bandwidth used for outgoing file transfers (Bytes/s)	
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED	No
Current bandwidth used for incoming file transfers (Bytes/s)	
CONNECTION_PACKETS_SENT_TOTAL	No
Total amount of packets sent	
CONNECTION_PACKETS_RECEIVED_TOTAL	No
Total amount of packets received	
CONNECTION_BYTES_SENT_TOTAL	No
Total amount of bytes sent	
CONNECTION_BYTES_RECEIVED_TOTAL	No
Total amount of bytes received	
CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL	No
Average bandwidth used for outgoing data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL	No
Average bandwidth used for incoming data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL	No
Average bandwidth used for outgoing data in the last minute (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL	No
Average bandwidth used for incoming data in the last minute (Bytes/s)	
CONNECTION_CLIENT_IP	No
The IPv4 address of the client	
CLIENT_IS_CHANNEL_COMMANDER	Yes
Indicates whether the client is a channel commander or not	
CLIENT_ICON_ID	Yes
CRC32 checksum of the client icon	
CLIENT_COUNTRY	No
The country identifier of the client (i.e. DE)	

### **DEFINITIONS**

The following enumerations can be used to change the behavior of various ServerQuery commands:

```
enum HostMessageMode {
 HostMessageMode_LOG = 1,
                                           // 1: display message in chatlog
  HostMessageMode_MODAL,
                                           // 2: display message in modal dialog
 HostMessageMode_MODALQUIT
                                           // 3: display message in modal dialog and close connection
};
enum HostBannerMode {
  HostMessageMode_NOADJUST = 0,
                                           // 0: do not adjust
  HostMessageMode_IGNOREASPECT,
                                           // 1: adjust but ignore aspect ratio (like TeamSpeak 2)
  HostMessageMode_KEEPASPECT
                                           // 2: adjust and keep aspect ratio
};
enum Codec {
  CODEC\_SPEEX\_NARROWBAND = 0,
                                           // 0: speex narrowband
                                                                       (mono, 16bit, 8kHz)
  CODEC_SPEEX_WIDEBAND,
                                           // 1: speex wideband
                                                                       (mono, 16bit, 16kHz)
  CODEC_SPEEX_ULTRAWIDEBAND,
                                           // 2: speex ultra-wideband (mono, 16bit, 32kHz)
  CODEC_CELT_MONO
                                           // 3: celt mono
                                                                       (mono, 16bit, 48kHz)
};
enum CodecEncryptionMode {
  CODEC\_CRYPT\_INDIVIDUAL = 0,
                                           // 0: configure per channel
  CODEC_CRYPT_DISABLED,
                                           // 1: globally disabled
  CODEC_CRYPT_ENABLED
                                           // 2: globally enabled
